Meddius Launches Integration Test Drive at HIMSS 2010

Integration as a Service Trial Offered to Prospective Customers

HIMSS 2010, ATLANTA, Georgia (March 1st, 2010). Meddius, the leading provider of integration appliances for the healthcare industry, now gives prospective customers the opportunity to explore Integration as a Service (IaaS). The announcement was made today at the 2010 Healthcare Information and Management Systems Society (HIMSS) conference at the Georgia World Congress Center in Atlanta, Georgia.

"This is an invitation to healthcare ISVs and providers to try Integration as a Service without risk or up-front cost. We want prospective clients to experience the turnkey capabilities of our Integration Routers® and the return on investment the Meddius solution delivers. With our expanded offerings and an appliance-based approach to integration, Meddius makes it simple for healthcare providers and vendors to try Integration as a Service," said Jeff Gunther, Founder and Chief Executive Officer of Meddius.

The Meddius approach to integration couples integration appliances, called Integration Routers®, with professional services to deliver results to customers on a subscription basis. Fundamentally different from the traditional approaches to application integration, in which the customer acquires a perpetual software license and assumes responsibility for the software's implementation and ongoing management, IaaS offers lower up-front cost, rapid implementation, and managed interface deployment, presenting significant advantages to healthcare providers and vendors.

"Meddius is helping hospitals of all sizes address the mounting challenge of integration by quickly transforming data into a strategic asset, unlocking its full value to improve patient care," said Ben Mills, Director of Product Management. "Our appliance-based service model provides an integration platform that is ready to operate in any datacenter."

To learn more about the Integration Test Drive program, please visit booth number 2959 in the Innovative Technology Pavilion at HIMSS or visit the Meddius website:

About Meddius

Our mission is to improve patient care by helping organizations make healthcare data universally accessible. We build best-in-class integration solutions, enabling the industry to accelerate and simplify the exchange of mission-critical information among applications. The Meddius Integration Router® is a rack-mountable, highly-scalable integration appliance built specifically to allow healthcare providers and vendors to quickly add real-time, intelligent system-to-system message routing capabilities to their networks. This turnkey solution delivers common message transformation, seamless integration, and high-performance routing functions in a low cost monthly subscription fee. Meddius is a privately held company headquartered in Charlottesville, Virginia. For details, visit www.meddius.com.
